Human Rights Before and After Covid-19: Getting Human Rights Education out of Quarantine

Glenn Mitoma

Alan S. Marcus
University of Connecticut

Abstract:
This essay explores the way in which the Covid-19 pandemic has worsened human rights conditions across the globe, particularly around the rise of authoritarianism, erosion of democracy, increase in hate crimes and racism, and deepening of economic inequality. We then advocate for the possibilities and significance of human rights education as a core component of every student’s learning experience and provide suggestions and specific resources for teaching human rights during and after the Covid-19 pandemic.
Introduction

Speaking in 1966, Robert F. Kennedy offered a powerful metaphor of change in a country fraught with injustice. Touring apartheid-era South Africa, Kennedy declared that one person standing up for an ideal or taking action “sends forth a tiny ripple of hope” that ultimately joins with others. Together, these ripples create “a current which can sweep down the mightiest walls of oppression and resistance” (Kennedy, 1966). Today, the world continues to challenge us to confront injustice, combat hatred, and fight for human rights, a challenge deepened by the Covid-19 pandemic. If, as Kennedy imagined, justice requires empowered, courageous, and knowledgeable individuals acting alone and in community with others, education must prioritize human rights as a core element of the curriculum. This article explores how the Covid-19 pandemic, by inflaming human rights issues around the world, has created opportunities to center human rights education (HRE) and encourage ripples of hope on the troubled waters of our world.

Human Rights Education

The 2011 United Nations Declaration on HRE and Training established a global definition of HRE as encompassing “all education, training, information, awareness-raising and learning activities aimed at promoting universal respect for and observance of all human rights.” Broad and open-ended, this definition orients HRE toward the progressive advancement of human rights in practice. It aims to prevent “human rights violations and abuses by providing persons with knowledge, skills and understandings and developing their attitudes and behaviors, to empower them to contribute to the building and promotion of a universal culture of human rights” (United Nations General Assembly, 2011).

HRE is understood to have three dimensions (United Nations General Assembly, 2011):

- **Education about** human rights, which includes providing knowledge and understanding of human rights norms and principles, the values that underpin them and the mechanisms for their protection;
- **Education through** human rights, which includes learning and teaching in a way that respects the rights of both educators and learners;
- **Education for** human rights, which includes empowering persons to enjoy and exercise their rights and to respect and uphold the rights of others.
In U.S. classrooms, human rights are most often discussed in the context of the Holocaust and other genocides (Donnelly, 2006). Currently, 42 of 50 states in the U.S. include human rights topics in their social studies standards as either required or example content (The Advocates for Human Rights, 2016).

Many K-12 students view human rights issues as non-American problems that happen elsewhere, particularly in “third world” countries (Barton, 2019). This view is concerning because “[i]f students consistently think of human rights as problems that apply to other countries but not their own, then studying human rights may not only reinforce negative stereotypes of other regions but also blind students to the need to address such issues locally and nationally” (Barton, 2019, p. 214). Barton proposes that in order to transform students and schools in line with human rights principles, HRE must support students to develop related content knowledge. For students to take action on human rights, they need to learn what these rights are and how institutions and policies can protect human rights (Barton, 2019). In particular, Barton recommends that teachers focus on social context—students’ own experiences and the influence of sources like the news—and help students understand the local, national, and global policies and practices related to human rights. The Covid-19 pandemic provides an unfortunate but critical opportunity for U.S. students to evaluate how the pandemic is impacting human rights in their own communities.

Human rights can be difficult to teach and learn. HRE involves trauma, making it both affectively and conceptually difficult (Walsh, Hicks, & van Hover, 2017). The prevalence of anti-human rights ideologies makes teaching human rights increasingly fraught. Within the context of racially, economically, and politically diverse school communities, HRE is especially difficult, as the trauma is not confined to the past but endemic in classrooms and communities (Epstein, 2009). Some teachers are uncomfortable addressing difficult histories when society is divided, and could resist incorporating multiple perspectives or interpretations in their teaching (Zembylas, 2016).

**Teaching Human Rights During and After a Pandemic**

Prior to the Covid-19 pandemic, there was no shortage of human rights issues for students to explore. These include the erosion of democracy in the face of authoritarianism, increased racist and anti-Semitic hate coupled with persistent structural racism, and extreme economic inequality. Contemporary human rights challenges such as these are deeply rooted, and the pandemic is exacerbating the harms they cause, further exposing political, racial, and economic divisions. This context provides an opportunity for authentic inquiry and learning. Here we...
explore these contemporary human rights issues, how they connect with the Covid-19 pandemic, and ideas for including them in social studies classrooms.

The Erosion of Democracy in the Face of Rising Authoritarianism

Recently, human rights experts and advocates have watched with alarm as the post-Cold War democratic consolidation has given way to authoritarian politics across the globe (Applebaum, 2020). For example, the governments of Viktor Orbán in Hungary and Jair Bolsonaro in Brazil retreated from democratic commitments with rhetoric and policies that explicitly reject human rights. The United States has joined this slide toward authoritarianism, with Freedom House, which is among the most respected human rights organizations in the world, noting that “[U.S.] democratic institutions have suffered erosion” (Freedom House, 2020a) and, under the banner of “America First,” the U.S. has all but abandoned its traditional role as a global champion for human rights (Freedom House, 2020b).

Authoritarian leaders have often exploited racial, religious, or other divisions to secure and maintain power. In India, for example, Prime Minister Narendra Modi’s virulent Hindu nationalism inspires intense loyalty and has spurred violence against minorities, including vigilante attacks on Muslims. This strategy of extreme polarization relies on casting one’s political opposition as not merely opponents but enemies. With the heightened anxiety and social pressure generated by Covid-19, this polarization has led to a politicization of necessary public health measures—wearing masks, limiting large gatherings, staying at home—in ways that reinforce divisions, seed interpersonal conflict, and may ultimately worsen the human toll of the virus.

Table 1 provides potential learning goals for HRE around the issue of rising authoritarianism, proposes how to connect similar historical issues to today, and suggests relevant teaching resources. The goals described highlight teaching about human rights to help students develop a richer knowledge and understanding of key human rights histories, concepts, and challenges. There are a range of connections to the past, as the current rise in authoritarianism echoes similar trends from the early twentieth century. The suggested resources orient teachers to reliable information on the challenges Covid-19 presents to human rights in the context of democracy and authoritarianism.

The Increasing Prevalence of Racist and Anti-Semitic Hate and Persistent Structural Racism

Well before the outbreak of Covid-19, reports documented a rise in racist, anti-Semitic, and Islamophobic hate. Far-right terrorist attacks from Norway to New Zealand, the surge of hate speech in U.S. schools following the 2016 election, and the return of anti-Semitic tropes and conspiracy theories are all indicative of the enduring human rights challenge of racism and bigotry.

The spread of Covid-19 has led to an increase in anti-Asian bias, extending a pattern of scapegoating minorities for disease that extends back at least to the Black Death. Asian Americans have been subjected to harassment and intimidation, with one poll finding that 60 percent of Asian American respondents reported witnessing someone blaming Asians for the pandemic (Jackson, Berg, & Yi, 2020). These acts emerge out of a long history of xenophobia against Asians, from the Chinese Exclusion Act in the 1880s to the internment of Japanese Americans in the 1940s. They are also extensions of rhetorical efforts on the part of the media and political leaders to label Covid-19 the “Chinese virus” or “Kung-flu.”

While the Asian American community has been disproportionately blamed for Covid-19, Black, Native, and Latinx communities have been disproportionately affected by Covid-19 itself. Black, Native, and Latinx individuals are more likely to contract the virus and, once infected, more likely to die as a result (Centers for Disease Control, 2020). Unequal access to health care, exposure to environmental contaminants as a result of segregation, and the daily “allostatic load” of living
with racism are just some of the reasons why people of color are at high risk for the comorbidities that make Covid-19 more deadly.

Table 2 provides potential learning goals for HRE around the issue of rising hate and systemic racism, connects similar historical issues to today, and suggests relevant teaching resources. The goals described below highlight teaching for human rights to help students develop values, attitudes and skills necessary to building a culture of human rights. We suggest a few sample resources relevant not only to the intersection of Covid-19 with race and ethnicity but also to the broader need to build racial equity into the curriculum.

Extreme Economic Inequality

Racial disparities overlay broader inequality across a range of economic and social rights, including access to food and housing security, health care, and quality education. Economic inequality has expanded over the past three decades and is a key driver of global migration and human rights risks. Within the United States, the distribution of wealth has become so concentrated that just three individuals—Jeff Bezos, Bill Gates, and Warren Buffet—have more wealth than the bottom 50 percent of households (Inequality.org, n.d.). Inequality has been compounded by Covid-19. The shutting of businesses led to the highest recorded unemployment rates since the Great Depression. These layoffs and furloughs have disproportionately impacted workers unable to telecommute, especially those in the hospitality, retail, and service sectors (Dey & Loewenstein, 2020). Predictably, food bank usage has surged. Mass foreclosures and evictions have been avoided only through timely legislative action. As schools moved to distance education, many in under-resourced districts found themselves cut off from meaningful learning opportunities. Many students fell through the cracks, particularly those with special needs or individualized education plans, without ready access to a computer or the internet, or whose home lives became more difficult.

Table 3 highlights potential learning goals, past-present connections, and resources for HRE connected to the problems of economic inequalities. The goals include those related to teaching through human rights to offer students an opportunity for authentic learning that promotes human rights in their own communities. In connecting with the past, students can explore how...
communities have worked to support each other in times of need. The selected resources provide contextual data on the economic impacts of Covid-19, as well as examples of “mutual aid” efforts.

Triaging Trauma: Community Schools Tap Partners to Address Needs Made Worse by COVID-19. Article exploring the role of community schools, which provide a range of services beyond just classroom instruction, in addressing the pandemic.

Conclusion

Society continues to struggle with protecting human rights, particularly for those marginalized based on race, gender, religion, sexual orientation, and other identities. These strains are magnified by the Covid-19 pandemic. Teachers have a responsibility to teach about past and current human rights issues. The connections between these past events and society today, particularly in light of the pandemic, makes this responsibility especially urgent. Human rights education can transform students into ripples of hope.
